SUMMARY

Full Stack Software Developer with professional, startup, and product-development experience building enterprise applications, developer tooling, web platforms, and mobile applications. Hands-on across React, React Native, TypeScript, Node.js, PostgreSQL, Prisma, C#, and Blazor — including authentication/authorization systems, REST API design, third-party API integration, and QA processes. Currently pursuing a BSc in Computer Science while co-founding and leading development on two startups.

EXPERIENCE

Full Stack Developer Intern — InfoWARE Limited Feb 2026 – Aug 2026

- Built and maintained internal and client-facing applications across the InfoWARE E-Business Suite — full-stack development, API tooling, UI implementation, and QA.
- Developed TradeLab, a C# and Blazor demo trading platform for exploring InfoWARE APIs through an authenticated app, subsequently released for public/customer use.
- Built a Blazor WebAssembly API Endpoint Tester parsing Postman collections, resolving nested variable placeholders via a custom regex resolver, running concurrent endpoint checks with live pass/fail reporting.
- Standardized documentation for ~20 EMSX API endpoints and designed/executed QA covering 51 test cases across the EOMS platform.

Lead Developer — AegisCare (Healthcare Technology Startup) Ongoing

- Designed and developed a multi-role healthcare coordination platform (Patient, Nurse, Hospital, Hospital Admin) across 29+ pages, built on React, TypeScript, Node.js, Prisma, and PostgreSQL.
- Implemented access/refresh token authentication, protected routes, and role-based authorization across distinct user roles.
- Architected Redux Toolkit + redux-persist state management and a scaffold-first, mock-data-driven development workflow.

Lead Developer — Ecstasy (Mobile Application Startup) Ongoing

- Lead development of a React Native mobile app backed by TypeScript, Node.js, Prisma, and PostgreSQL — owning architecture, authentication, API integration, and core mobile functionality.

SELECTED PROJECTS

DevPulse — API Operations & Monitoring Platform

React, TypeScript, Redux Toolkit, Node.js, Express, Prisma, PostgreSQL, Docker

- Full-stack platform for managing, testing, and monitoring REST APIs — endpoint management, uptime monitoring, latency tracking, and automated health checks, with JWT-based auth and PostgreSQL-backed integration tests in CI.

GatePass-OS — Estate Security & Visitor Management System

React, TypeScript, Express, Prisma, PostgreSQL, Redis, Socket.IO, Paystack

- Role-based dashboards for residents, security staff, and admins; one-time visitor passes, QR member badges, real-time emergency broadcast via Socket.IO, and Redis-backed session/rate-limiting.

Caf App — Campus Food-Court Companion App

React, Express, Prisma, PostgreSQL, Docker

- Live restaurant queue tracking and menu browsing for customers, with an OTP-verified login step and JWT access/refresh authentication.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, C#, SQL, HTML, CSS
Frontend/Mobile	React, React Native, Redux Toolkit, RTK Query, React Router, styled-components, Blazor WebAssembly
Backend	Node.js, Express, Prisma, PostgreSQL, REST API Design
Auth	Access/Refresh Tokens, JWT, Cookie-Based Auth, Role-Based Authorization
Tools	Git, Docker, GitHub Actions, Postman, QA Test Design, Figma

EDUCATION

BSc. Computer Science — Redeemer's University, Nigeria Expected 2027
